

Fitted HMM Interaction Effects of Team(t-1) vs. Team(t), Team vs. Peer Average, and Target Attainment on AI Authority Rate

Target Attainment held at Medium = 0.050. Each layer is the fitted expected AI Authority Rate at time t for a previous latent state: transition probabilities into the three states are multiplied by the fitted state emission means. The z-axis is zoomed to the fitted surface range to make model-implied variation visible.

	Previous Aversion	Previous Neutral	Previous Appreciation
Predicted AI Authority Rate: Low X / Low Y	4.6%	7.0%	20.9%
Predicted AI Authority Rate: High X / Low Y	5.1%	4.7%	10.8%
Predicted AI Authority Rate: Low X / High Y	23.8%	23.0%	43.8%
Predicted AI Authority Rate: High X / High Y	26.6%	27.2%	43.8%
Emission mean: State_t = Aversion	3.8%	3.8%	3.8%
Emission mean: State_t = Neutral	22.4%	22.4%	22.4%
Emission mean: State_t = Appreciation	44.1%	44.1%	44.1%
Surface minimum	3.8%	3.8%	3.8%
Surface maximum	44.0%	43.7%	44.1%
