

Fitted HMM Interaction Effects of Team(t-1) vs. Team(t), Team vs. Peer Average, and Target Attainment on Escalation Rate

Target Attainment held at Medium = 0.050. Each layer is the fitted expected Escalation Rate at time t for a previous latent state: transition probabilities into the three states are multiplied by the fitted state emission means. The z-axis is zoomed to the fitted surface range to make model-implied variation visible.

	Previous Aversion	Previous Neutral	Previous Appreciation
Predicted Escalation Rate: Low X / Low Y	59.2%	58.9%	56.8%
Predicted Escalation Rate: High X / Low Y	59.1%	59.2%	58.2%
Predicted Escalation Rate: Low X / High Y	56.5%	56.8%	50.7%
Predicted Escalation Rate: High X / High Y	55.7%	55.5%	50.7%
Emission mean: State_t = Aversion	59.3%	59.3%	59.3%
Emission mean: State_t = Neutral	56.9%	56.9%	56.9%
Emission mean: State_t = Appreciation	50.6%	50.6%	50.6%
Surface minimum	50.6%	50.7%	50.6%
Surface maximum	59.3%	59.3%	59.3%
