

Posterior-Weighted Joint Effects of Performance Benchmarks on AI Authority Rate Across Latent Delegation States

Conditioning levels for Target Attainment: Low=0.000, Medium=0.078, High=1.000.

	Aversion	Neutral	Appreciation

Significance: * p < 0.10, ** p < 0.05, *** p < 0.01. Coefficients and fit statistics are posterior-weighted OLS estimates.

Note. Surfaces show the fitted joint effects of own-performance change, peer-benchmark performance, and target attainment on AI Authority Rate. Coefficients are posterior-weighted OLS estimates using HMM state probabilities as weights. Surfaces are drawn over the central 5%-95% observed driver range (X=−0.200 to 0.205; Y=−0.178 to 0.190) to reduce edge clipping from extrapolated fitted values.
